

Don't leave Public Safety hanging on a wire: Securing the community with Broadband Wireless

Making Public Safety work in the community entails a vast web of independently mandated departments, from law enforcement agencies and first responder units to firefighters, Emergency Medical Services (EMS), hospitals and beyond. Getting all of these players "on the same page" can often mean the difference between crisis and control.

The key to it all? Seamless, inter-departmental networking empowered by Alvarion's broadband wireless systems. Wireless enables every agency to communicate freely with its counterparts by making mission-critical data, video feeds and mobile services available in real-time to all the links in the public safety chain.

When networking requires the ultimate in reliable infrastructure to ensure public safety - the choice is Alvarion. From linking together video surveillance feeds from roadways, city centers and shopping malls to connecting the campuses of various public safety agencies and providing mobile broadband for officials on-the-move, networking with traditional landline infrastructure is just too difficult.

Beyond the physical obstacles involved in trenching cable virtually everywhere, there is the expense. Leasing dedicated E1 or T1 lines for public safety purposes is a costly recurring expenditure that city finance planners can ill afford.

Alvarion's industry-leading wireless systems link together Public Safety agencies in a network that is independent of landline infrastructure. They enable real-time, mobile broadband access to critical databases, seamless voice services, live video feeds from geographically-spread surveillance cameras and a host of other services. Wireless literally creates a new and more efficient paradigm for public safety agencies to work together, save costs and significantly utilize existing manpower more effectively.

Alvarion:
Empowering Your Community

As Public Safety issues grow increasingly more complex to address, the end goal still remains straightforward: to empower the community with reliable security services and enable the routine of daily life to proceed comfortably.

About Alvarion

With more than 3 million units deployed in 150 countries, Alvarion is the worldwide leader in wireless broadband providing systems for point-to-multipoint connectivity and backhauling to carriers, ISPs and private network operators.

With over a decade of technology standards leadership and the industry's most extensive product portfolio covering the full range of frequency bands, the company is the world's largest pure play provider of wireless broadband networking infrastructure for last mile communications markets. Financially strong and built to last for the long term, its world class products and technological platforms installed worldwide address the needs of every major BWA segment.

Alvarion: Empowering the Community

The following field-proven Alvarion systems are ideal for improving municipal communications and operations: BreezeACCESS®, BreezeNET®, BreezeMAX™.

Public Safety Application

Alvarion's Broadband Wireless Offering: Platform to Public Safety

Mobile broadband

To really make a difference, law enforcement personnel in the field require a robust and reliable communications network to report to various destinations and access information from different sources in real-time. Deploying Alvarion wireless equipment saves valuable time!

Building connectivity

Linking together the communications networks of all public safety agencies with wireless systems means that mission critical data is always available when needed. Need the local police linked into the security network of the local college? Want to provide firefighters with a means to quickly relay vital information to the nearby hospital emergency room? Leasing expensive E1s or T1s is no longer necessary. With cost-effective Alvarion wireless equipment deployed at virtually any endpoint, hooking up every player in the local public safety arena is simple, fast and effective.

Video surveillance

Video surveillance has proven to be an effective means for both deterring and solving crime in a wide variety of community settings. But fixed camera networks are ineffective without the means to deliver images to the wide variety of players who need to access them. The flexible deployment and built-in cost efficiency of Alvarion wireless systems make it the ideal delivery network for video-based security applications. Applicable in industrial zones, warehouses, remote mission critical facilities, high crime/high risk areas and beyond, wireless makes surveillance simple. No need to access the local fiber network (if there even is one); simply position a camera with an attached wireless unit wherever you need it and images are ready for quick relay throughout the network. Firefighters, police patrol cars and rescue workers can view an incident prior to their arrival on the scene and save precious time in assessing how to respond.

Enhanced security services

Tie in your wholly-owned, Alvarion wireless network to local shops, malls, bank networks, roadways and more. The public will feel safer and public safety agencies will enjoy quicker response times and more effective handling of the myriad incidents they deal with – from stopping a crime in progress, to arriving on the scene of a traffic jam or rushing to fight a fire in a warehouse on the outskirts of town.
