

# Welcome to WinnCloud®

## One Tool, Countless Benefits

Take a proactive approach to maintaining your network health and reap the immediate benefits!

With WinnCloud®, there is finally a network monitoring solution out on the market that can truly see your entire network giving you all the vital information you need on your network health and performance.

- Has your network grown to a point here you need help maintaining it?
- Are you stretched too thin?
- Do you want your personal life and “free time” back?
- Do you want to focus on growing your business and utilizing resources to maximize your potential revenue?
- Are you lacking the resources to purchase monitoring software or to build your own NOC?

**Your answer is here! Simplify your network management operations with WinnCloud!**

Monitor your networks, servers, routers/switches, power and more!

Let WinnCloud help you meet your customers needs when it comes to Network Availability, VoIP and QoS.

## Save Money and Expand Your Business

Avoid costly investments and centralize your eye on your network with one meeting point. No need to hire technicians to sit at the NOC 24/7. Watch your network from anywhere!

## Do Your Job Better than the Competition

Anticipate network problems BEFORE they arise and BEFORE they affect your customers. Gain your customers' trust by notifying them of potential issues before they become issues.

## The WinnCloud® Advantage

- One platform to see your entire network regardless of manufacturer
- Premium Network Monitoring Solution at "Off-the-Shelf" pricing
- No Upfront Capital Expenditure
- Host in the Cloud or On-Premise
- Scalable Solution for Small to Large Businesses
- No Hassle, Free Trial & Custom Development

# Going Beyond Basic IT Monitoring:

## Anytime, Anywhere Access to Your Entire Network with WinnCloud®

We can scale our software from basic monitoring to highly-customized, enterprise class monitoring capabilities. The depth of your custom monitoring solution is completely dependent upon your needs.

- **Unmatched Capabilities:** Use rich map designing toolset to draw interactive network maps that illustrate the operation of your network from different perspectives with just a few mouse clicks. Proactive control over your network with the ability to troubleshoot and recommend system upgrades.
- **Visibility and Central Dashboard:** Get a central view of your entire IT operations network and business processes from any location. Powerful and customizable dashboards provide quick and easy access to powerful monitoring information and WinnCloud data. You can easily customize your views to provide quick access to the information you find most useful.
- **Alerts and Awareness:** Alerts can be sent to anyone via email or mobile text messages. Alerts will provide you with potential outage details so you can start resolving issues immediately, and even before they become problems for your customers.
- **Proactive Planning:** Integrated trending and capacity planning visuals allow you to proactively plan for infrastructure upgrades before outdated systems catch you by surprise.
- **Ease of Use and Accessibility:** An integrated web-based interface allows you to easily assign monitoring and management control, system settings, and more to end users and team members. Unlike the painful processes associated with a typical monitoring system of adding and managing devices, WinnCloud makes it straightforward and simple!
- **Change Awareness:** Get insight into all the components that support your current network, and get updated on all the network changes with integrated auto-discovery function.
- **Management and Control:** Take control over your network problems with the integrated trouble ticketing system feature. Create, assign, track and manage problem tickets directly from the monitoring system's interface. Never leave a single issue on your critical network components unresolved with automatic ticket creation and assignment function.
- **Mobile Access:** Get access to network monitoring functions anytime, anywhere using Web interface and/or Apple iOS, Android and Windows Phone mobile apps.

# Advanced Monitoring Services:

## WIRELESS BROADBAND

- Received Signal Strength Indication (RSSI)
- Signal to Noise Ratio (SNR)
- Interface Bandwidth
- Latency (Up/Down)
- Operating Frequency
- Cyclic Redundancy Check (CRC)

## ROUTERS/SWITCHES (per port, physical and virtual):

- Bandwidth
- Status (Up/Down)

## POWER:

- System Status
  - Per AC line
- Battery Status
  - Voltage
  - Current

## GPS:

- System Uptime
- Status (Up/Down)

## WINDOWS SERVER:

- Latency (Up/Down)
- CPU Usage
- Memory Usage
- Uptime
- Disk Usage (Per disk monitored)

## LINUX SERVER:

- Latency (Up/Down)
- CPU Usage
- Load Averages (1/5/15 min)
- Memory Usage
- Uptime
- Disk Usage (Per file system)

## WinnCloud® in a Nutshell:

Let's keep it simple. There is an enormous amount of metrics that can be monitored on a network device. We want to make keeping an eye on your network easier, make it visible from one piece of software, and accessible anytime, and from any device. We're ready to give you that tool you've been looking for!

### • Cross Platform Device Support

Get access to every device on your network.

### • Network Health and Performance Monitoring

Predict system upgrade needs based on integrated trending and capacity planning visuals.

### • Cloud-Based Hosting

Protect the sensitive nature of your network and your users with our safe and reliable cloud-based system.

### • Custom Features Not Available with Your Average Monitoring Service

Predict problems before they occur with features such as geographic and weather maps, triaging multiple devices at one time, and much more.
