E4G-200
Cell Site Router

Highlights
The E4G-200 enables service providers to provide Ethernet/IP services cost-effectively at any cell site, including optional TDM pseudowires and deployments of 4G base stations. This flexibility gives service providers the ability to deploy revenue-generating services at 2G/3G cell sites and allows for 4G deployments and new Ethernet/IP services.

- Increased Gigabit Ethernet ports – twelve active GbE ports
- Optional industry-standard pseudowires – supports up to 16 E1/T1 ports with up to 256 pseudowires
- Extended temperature range – from -40°C to +65°C
- Certified and optional synchronization – both IEEE 1588v2 and SyncE
- Carrier-grade resiliency – through EAPS (Ethernet Automatic Protection Switching, RFC 3619) or ITU-T G.8032 Ethernet Ring Protection standard
- Integrated Ethernet OAM – support for IEEE 802.3ah, IEEE 802.1ag, and ITU Y.1731 in hardware for extremely accurate delay, jitter, and frame loss measurements
- Low latency for LTE
- Line rate performance
- Compact size – 1 RU and only 10 inches/25.4cm in depth
- All front access - every connection (data, power, & management) is from the front of the unit

Overview
For service providers, revenue growth is increasingly driven by 3G and eventually 4G mobile services that provide access to compelling smartphone, and tablet-based, and other mobile applications. The challenge in designing true 4G mobile backhaul is to build a foundation that protects existing investments in 2G and 3G services, provides a superior subscriber experience, prepares for future 4G service requirements, and minimizes costs. This challenge can be met by deploying a true 4G mobile backhaul network with three key ingredients: resiliency, synchronization and performance.

Extreme Networks E4G-200 router is a carrier-grade Ethernet platform that provides a seamless migration path from TDM circuits to Ethernet services for mobile operators and creates a fundamental Ethernet infrastructure capable of scaling to the needs of 2G, 3G and 4G mobile networks.

Product Description
The Extreme Networks E4G-200 Cell Site Router delivers Ethernet, IP/MPLS and pseudowire capabilities in a compact 1RU form factor. The E4G-200 provides mobile operators the ability to manage and aggregate TDM and Ethernet services and their associated protocols onto an economical and efficient Ethernet mobile backhaul infrastructure.

The Extreme Networks E4G-200 Cell Site Router (CSR) is where 4G backhaul begins and where the T1/E1 pseudowire circuit for 2G/3G is also initiated. Installation is in or very near to the base station tower. 2G and 3G base stations use T1/E1 for backhaul connectivity and 4G base stations connect directly to the cell site router via Ethernet. The E4G-200 provides the necessary interfaces for 2G, 3G, and 4G base stations while still meeting the demands of its installation environment, in a design that is very compact (less than 10 inches/24 cm deep), and features an extended temperature range.

The Extreme Networks E4G-200 router is designed for services running over an Ethernet and IP/MPLS infrastructure. The E4G-200 is designed to backhaul 2G, 3G and 4G mobile traffic, using a single backhaul network instead of a multiple backhaul networks which translates into an economical deployment model. Service providers, energy utilities,
With an extended temperature range of -40°C to +65°C, service providers can deploy the E4G-200 router at sites without climate control, enabling more sites to convert to packet-based backhaul, reducing CapEx and OpEx, and allowing Ethernet/IP services to be delivered to a larger target market.

Twelve active GbE ports allow service providers to connect more 4G base stations for growth and to support other Ethernet/IP equipment local to the cell site.

Mobile backhaul networks require accurate timing. The E4G-200 provides today’s existing TDM timing on it T1/E1 ports as well as the Ethernet-based timing—both IEEE 1588v2 and SyncE—on its Ethernet ports.

Extreme Networks supports EAPS as well as the G.8032 Ethernet Ring Protection standard.

Support for IEEE 802.3ah, IEEE 802.1ag, and ITU Y.1731 gives management and reporting control over the Ethernet backhaul, including pseudowires to provide integrated Ethernet OAM.

Functions in the hardware allow for mere microseconds of latency to improve performance of latency-sensitive applications that are a part of LTE rollouts.

Ports, services and OAM functions run at line rate with no degradation in service when the different feature sets are enabled.

Extreme Networks Ethernet mobile backhaul solutions are geared towards the unique demands of mobile operators. Our solutions offer support for multiple generations of services. Mobile operators can lower their capital expenses (CapEx) and operational expenses (OpEx) by reducing the number of network elements and simplifying operations. Our solutions can enable mobile operators to deliver a network that is geared towards the new mobile world, providing access, awareness and control, from the cloud to the converged edge.

**Key Features and Benefits**

The 1RU size of the E4G-200 allows economical installation in cell site locations where space is limited. All Extreme Networks advanced routing and switching features, including IPv6, are available on this compact and powerful platform.

E4G-200 optionally supports up to 16 ports for circuit emulations via industry-standard pseudowires, allowing the transformation of TDM cell sites to Ethernet/IP/MPLS cell sites.
Technical Specifications

Synchronization

- Internal Stratum-3 Clock
- Telcordia GR-1244-CORE
- Common Clock Distribution across all Ports
- External Reference Timing Input (BITS)
- Synchronous Ethernet (ITU-T G.8262)
- IEEE 1588v2 Precision Time Protocol
- Adaptive Clock Recovery (ACR) for TDM
- Pseudowires
- Differential Clock Recovery (DCR) for TDM pseudowires

Resiliency

Services

Pseudowires

- CESoPSN – Structure-Aware Time Division Multiplexed (TDM) Circuit Emulation Service over Packet Switched Network
- SAToP – Structure-Agnostic Time Division Multiplexing (TDM) over Packet
- MEF 8 Implementation Agreement for the Emulation of PDH Circuits over Metro Ethernet Networks
- PWE3 Control Word for Use over an MPLS PSN
- Pseudowire Setup and Maintenance using the Label Distribution Protocol (LDP) or RSVP
- Encapsulation Methods for Transport of Ethernet over MPLS Networks

VLANs

- VLAN Tagging
- Port-based VLANs
- Protocol-based VLANs
- MAC-based VLANs
- Multiple STP domains per VLAN
- Private VLANs
- Virtual MANs (vMANs)

MPLS and VPN Services

- Multiprotocol Label Switching Architecture
- MPLS Label Stack
- RSVP Refresh Reduction
- Label Distribution Protocol (LDP)
- RSVP-TE: Extensions to RSVP for LSP Tunnels
- Traffic Engineering Extensions to OSPFv2
- Fast Re-route Extensions to RSVP-TE for LSP (Detour Paths)
- Detecting MPLS Data Plane Failures (LSP Ping)
- Bidirectional Forwarding Detection

Layer 2 VPNS

- Pseudowire Setup and Maintenance using the Label Distribution Protocol (LDP)
- Encapsulation Methods for Transport of Ethernet over MPLS Networks
- Virtual Private LAN Services (VPLS) using Label Distribution Protocol (LDP) Signaling
- Pseudowire Virtual Circuit Connectivity Verification (VCCV)

Software

- Ethernet Automatic Protection Switching (EAPS)
- ITU G.8032v2 Ethernet Ring Protection

Performance

- Aggregated Switch Bandwidth: 24.1 Gbps
- Frame Forwarding Rate: 17.8 Mpps
- Latency: <4 microseconds (64-byte)
- Max Packet Size: 9,216 Byte (Jumbo Frame)
- Layer 2 Packet Forwarding: 80,000 packets per second
- VLANs: 4,094
- Ingress QoS queues/port: 8
- Ingress bandwidth meters: 2,048
- Egress bandwidth rate shaping per egress queue and per port
- Egress rate granularity: 8 Kbps
- Total Trunks: 12 load sharing, Members per trunk: 8
- Egress QoS queues/port: 8
- Egress bandwidth rate shaping per egress queue and per port
- Egress rate granularity: 8 Kbps

LED Indicators

- Per port status LED including power status
- System Status LEDs: management, fan and power feeds

External Ports

E4G-200-DC Router

- 8 x 10/100/1000BASE-T (RJ-45)
- 4 x 100/1000BASE-X (SFP) unpopulated ports
- 1 x Serial (console port)
- 1 x 10/100BASE-T out-of-band management port
- 1 x 15 pin D-sub – for Alarm Input / Output

E4G-F16T1E1 Module

- 16 x TDM E1/T1 Ports

E4G-CLK Module

- 4 x mini-BNC Ports – 1 PPS Input, 110MHz

Input, 1PPS/8k Output, 11.5/2.0/10 MHz Output
- 1 x RJ45 – RS422 BITS/TOD Input

Weight and Physical Dimensions

E4G-200-DC Router

- Weight: 114 lb (5.46 kg)
- Height: 17.5 inches (4.4 cm)
- Width: 17.25 inches (43.8 cm)
- Depth: 10.75 inches (27.3 cm)

E4G-F16T1E1 Module

- Weight: 2.0 lb (0.9 kg)
- Height: 17.5 inches (4.4 cm)
- Width: 6.25 inches (15.9 cm)
- Depth: 9.5 inches (241 cm)

E4G-CLK Module

- Weight: 0.75 lb (0.34 kg)
- Height: 17.5 inches (4.4 cm)
- Width: 2.5 inches (6.4 cm)
- Depth: 8 inches (20.32 cm)

Environmental Specifications

Operating Temperature

- -40°C to 65°C (-40°F to 149°F)
- Humidity: 10% to 95% relative humidity, non-condensing
- Altitude: 0 to 5,000 meters (9,850 feet)
- Shock (half sine): 30 m/s2 (3 G), 11 ms, 60 shocks
- Random vibration: 3 to 500 Hz at 1.5 G rms

Fan Speed

- Minimum: 0 RPM (<50° C)
- Maximum: 10,500 RPM (>50° C)

Airflow

- Side to side

Storage and Transportation

- Transportation Temperature: -40°C to 70°C (-40°F to 158°F)
- Storage and Transportation Humidity: 10% to 95% RH, non-condensing
- Package Shock (Half Sine): 180 m/s2 (18 G), 6ms, 600 shocks
- Package Sine Vibration: 5-62 Hz @ Velocity 5mm/s, 62-500 Hz @ 0.2G
- Package Random Vibration: 5-20 Hz @ 1.0 ASD w/-3dB/oct. from 20-200 Hz
- 14 drops min on sides & corners @ 42” (<15 kg box)

Acoustic Noise

- Fan off (<50°C): 0 dBA
- Fan on (>50°C): 54.1dB

Power Specifications

E4G-200-DC Router

- Nominal input ratings:
  - ~22 to 60 V DC auto-detecting
  - ~48 V, 1.25 A or ~24 V, ~2.5 A
**Technical Specifications**

**Input Current at Full Load**
- 0.68 A @ +24 V
- 0.52 A @ –48 V

**Input Power at Full Load**
- 33 W

**Heat Dissipation**
- 33 W
- 113 BTU/hr

**Maximum Inrush Current**
- 35 A at 72 V peak

---

**E4G-200-DC Router w/ E4G-F16 T1E1 Module**

**Nominal input ratings:**
- –22 to 60 V DC auto-detecting
- –48 V, 1.25 A or +24 V, 2.5 A

**Input Current at Full Load**
- 0.89 A @ +24 V
- 0.69 A @ –48 V

**Input Power at Full Load**
- 43 W

**Heat Dissipation**
- 43 W
- 147 BTU/hr

**Maximum Inrush Current**
- 35 A at 72 V peak

---

**E4G-200-DC Router w/ E4G-CLK Module**

**Nominal input ratings:**
- –22 to 60 V DC auto-detecting
- –48 V, 1.25 A or +24 V, 2.5 A

**Input Current at Full Load**
- 0.78 A @ –48 V
- 1.02 A @ +24 V

**Input Power at Full Load**
- 49 W

**Heat Dissipation**
- 49 W
- 167 BTU/hr

**Maximum Inrush Current**
- 35 A at 72 V peak

---

**Power Connections**
- 3-pin terminal block input socket (2 sockets for A-feed and B-feed connections)
- Power cord input plug/socket: 3-pin terminal block connector
- Power Supply Cord Gauge: #14 AWG

---
